

## TOP 20 REASONS ZYLYM™ WATER TECHNOLOGY CAN BENEFIT YOU

(With Solutions That Save Money)

Pictured is ZYLYM™ Model ZT-4 SS (Flow range 240 to 594 GPM / 908 to 2,249 LPM)

ZYLYM™'s ability to unclog water-using pipes, equipment, and soil pores of hard calcium carbonate mineral deposits ("lime scale") produces dozens of documented benefits. Simply stated, here are the favorite top 20.

When you use ZYLYM™ in irrigation for agriculture, turf, community settings:

- Get excellent 16% to 29% typical water conservation (in rare specialized cases even more)
- Open up soil pores of hard deposits so needed water, air, and nutrients can reach root zones
- With drip irrigation applications, eliminate scale build-up for easy water flow
- Improve ability of roots to develop and grow more healthfully
- Improve soil quality, with lessened soil salinity and improved water surface tension
- Improve crop quality and/or quantity
- Increase crop revenue (sometimes \$300 to \$1,091 or more annually per acre)
- Cut costs (with a lowered water bill and no chemicals needed for ZYLYM™)

When you use ZYLYM™ for de-scaling water-using pipes and equipment in business, home, industry:

- Open up pipes to needed water flow (so equipment can perform to design specifications)
- Increase percentage of equipment efficiency and productivity
- Powerfully reduce hard calcium carbonate scale deposit problems typically to zero
- Improve equipment longevity (when pipes are not rusting and corroding from scale)
- By using a non-chemical solution, improve human, community, and environmental safety
- Greatly reduce maintenance hassles and expenses (and with much less down time of equipment for repairs)
- By cutting costs and improving productivity, increase bottom line net income

In all your ZYLYM™ applications:

- Once water is ZYLYM™ treated, it stays conditioned indefinitely
- Save money, with a rapid return on investment of 3 months to 2.8 years (basically letting the cost-effective ZYLYM™ quickly pay for itself)
- Save time, with easy scale solutions that work
- Go green (as well as save green), with ZYLYM™ -- sustainable, catalytic, non-chemical, not a water softener, environmentally safe, a scientifically advanced green technology innovator
- Enjoy dual functions --- de-scaling of existing deposits, plus prevention of scale formation
